Why OikoLexis exists

Language remains a major barrier to equitable participation in the global OHDSI community.

Many researchers cannot fully access or contribute to OHDSI resources - especially *The Book of OHDSI* - because high-quality scientific translations are not available in their local languages. This challenge was first articulated by **OHDSI Africa**, whose community stressed the need for accessible learning materials to foster local training, teaching, and method adoption.

OikoLexis was created in direct response to this need, aiming to provide multilingual access without sacrificing methodological rigor, semantic precision, or reproducibility; the core values of OHDSI.

What is OikoLexis?

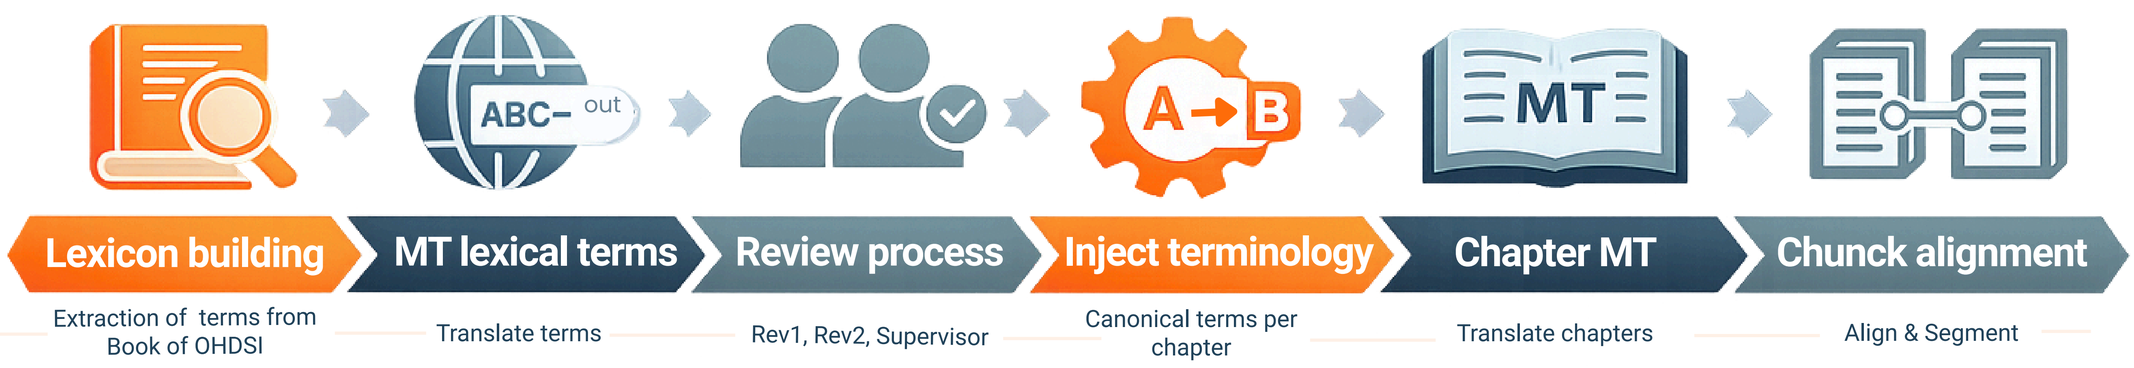
A translation ecosystem, not just a tool.

OikoLexis combines AI-powered translation with structured expert review to produce high-quality, community-validated translations of The Book of OHDSI across languages.

It is built on governance, terminology curation, and workflow enforcement to ensure scientific precision.

- **AI-powered machine translation**
- **Structured expert review**
- **Governance & traceability**
- **Language-agnostic by design**

Machine translation (MT) workflow *(executed centrally)*



Two-phase governance model

PHASE 1

Preparative phase

Structural readiness before any revision begins

- Identity accountability & role registration
- Role-bound task planning & planning anchoring
- Bilingual Revision Matrix preparation
- Terminology extraction & author validation
- Workflow state enforcement

PHASE 2

Revision phase

Community experts validate each translation unit

- Paired source/target bilingual revision interface
- GitHub-committed changes with full traceability
- Enforced reviewer level transitions (R1→R2→R3)
- Central terminology approval loop
- Community-governed publication pipeline

Who we need *(and what you'll do)*

Management

- Coordinator
- Recruiter
- Project contact-person
- OHDSIbook WorkGroup Contact
- Linguistic consultant

OR

Linguistic Consultant & Review of MT

- Reviewer1 (Rev1)
- Reviewer2 (Rev2)
- Supervisor

Human-in-the-loop *(governed review layer)*

- Self-selection of roles & chapters
- Automatic assignment to first reviewer
